                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     THE BETA CELLS; IT MAY COMPRISE PART OF THE GLUCOSE SENSING MECHANISM OF THE BETA CELL. IT MAY ALSO PARTICIPATE WITH THE NA(+)/GLUCOSE COTRANSPORTER IN THE TRANSCELLULAR TRANSPORT OF GLUCOSE IN THE SMALL INTESTINE & KIDNEY.

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

TISSUE SPECIFICITY: PRESENT IN LIVER, INTESTINE, KIDNEY AND BETA-PANGREATIC ISLET CELLS.

SIMILARITY: HIGH TO OTHER GLUCOSE TRANSPORTER FAMILY.

SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: FACILITATIVE GLUCOSE TRANSPORTER. THIS ISOFORM LIKELY MEDIATES THE BIDIRECTIONAL TRANSFER OF GLUCOSE ACROSS THE PLASMA MEMBRANE OF HEPATOCYTES & IS RESPONSIBLE FOR UPTAKE OF GLUCOSE B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SWISS-PROT entry is copyright. ```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
